Acknowledgments

This booklet, *Response to Intervention: Straight Talk for Parents*, updates the 2015 version developed by the Building Capacity for Response To Intervention Project team at the Meadows Center for Preventing Educational Risk, College of Education, The University of Texas at Austin. The Texas Education Agency funds the Project to promote the implementation of Response To Intervention (RTI) in Texas schools. To this end, we partner with Education Service Centers to provide professional development and technical assistance to schools.

Introduction

This booklet for parents is about Response To Intervention (RTI). RTI is an approach for teaching your child. The booklet explains RTI. Once you understand it, you can find out how your school uses it to teach your child. This booklet also includes resources you can use to learn more about RTI.

What is RTI?

RTI stands for **R**esponse **T**o **I**ntervention. Some schools refer to RTI as a “multi-tiered system of support,” or MTSS. “Multi-tiered” means many levels. Schools use RTI to help all students, including struggling learners. It is not a special kind of program or book. Many Texas schools use RTI to make sure that every student has opportunities to learn and work on grade level. The goal of RTI is to help *all* students be successful.

RTI is getting a lot of attention now. In 2004, Congress passed the Individuals with Disabilities Education Improvement Act (IDEA). This is a special education law. It names two ways that schools may choose to identify students with specific learning disabilities. One way is the “discrepancy model,” which has been used for many years. A school uses this model to identify a specific learning disability in a student if he or she is working below what is expected for his or her IQ.

RTI is the other way that IDEA names. When students struggle with learning, they are “at risk.” With additional help, or intervention, many can catch up. In schools using RTI, teachers provide intervention as soon as students have difficulties. They do not wait for students to fail.

Once students are identified as “at-risk,” special instruction, or intervention, helps them close their learning gaps. Teachers record the progress of their at-risk students. If a student does not catch up over time, this may be a sign of a learning disability. RTI records can be useful if the student is evaluated for special education. These records can help you and your child’s teachers decide whether special education is needed.

RTI can be used in any content area. (Content areas are reading, math, language arts, science and social studies.) It is used most often in **reading** and **math**. It may also be used to improve student behavior. In schools that use RTI:

1. Classroom teachers provide effective instruction to all students.
2. Teachers assess all students several times a year. This helps them know whether students are working on grade level.
3. Teachers use this assessment information to identify at-risk students. These are students who are working below grade level.
4. Teachers use this assessment information to plan specific intervention that meets the needs of at-risk students..
5. The school informs parents that their child needs intervention.
6. Teachers provide intervention to at-risk students.
7. Teachers check the progress of at-risk students often. Students who catch up to grade level no longer need intervention.
8. Teachers inform parents about their child's progress in intervention.

1. Classroom teachers provide effective instruction to all students. Many schools schedule blocks of time for content-area instruction so that students get enough daily instruction in each area. Based on research, teachers design daily lessons that focus on what is important for success. They explain a new concept and show students how to use it. Then they guide students' practice. Students practice what they have learned many times. Teachers also make sure students know how to behave in school.

2. Teachers assess all students several times a year. These test or screening times often are the beginning, middle, and end of the school year. Teachers compare students' scores to "benchmark" scores. Benchmark scores are what are expected for all students at that grade level for that time of year. Students whose scores are below the benchmark are at risk for learning problems. Teachers may test them more to find out where they are having trouble.

3. Teachers use this assessment information to identify at-risk students. These are students who are working below grade level. At-risk students need immediate help to prevent learning problems. In schools using RTI, teachers know which students are at risk.

4. Teachers use this assessment information to plan specific instruction that meets the needs of at-risk students. Teachers review students' scores. They set up small groups of students who have similar needs. They identify these students' gaps in learning, set goals, and plan interventions for them.

5. The school informs parents that their child needs intervention. Parents are notified when their child is identified as at-risk. They receive a letter that describes the intervention for their child. The letter tells how often the child will receive intervention, and for how long. It also describes how the school will measure and report the child's progress.

6. Teachers provide intervention to at-risk students. Teachers target the skills students need to close learning gaps. Intervention is provided in small groups so students can get more attention and practice. Ideally, students receive intervention daily.

7. Teachers check the progress of at-risk students often. At-risk students are assessed every 2 or 3 weeks. This is called progress monitoring. Teachers can chart each student's progress to know whether the intervention is working. It is working when students close their gaps in learning, or "respond to intervention." When students do not meet their learning goals, teachers adjust the intervention. If at-risk students meet their goals and catch up to grade level, they no longer need intervention.

8. Teachers inform parents of their child's progress. Parents receive regular progress reports or meet with teachers to know how their child is doing.

RTI is different in each school. School leaders know their staff, and together they know their students' needs. They work together to design how RTI will work in their school.

They have to plan:

- How to know when a student is at risk.
- Who will teach the intervention lessons.
- The amount of time provided for intervention.
- When the intervention lessons will be taught.
- How many at-risk students will be in a group.
- How many weeks the intervention will last.
- How to know when a student no longer needs intervention.
- How to know when a student needs to be considered for special education.
- How to communicate student progress to parents.

RTI methods can be used to support good school behavior too. Many schools use Positive Behavior Intervention Supports (PBIS) to help students learn how to behave in school. In schools using PBIS, all teachers know the behaviors students need to use. They teach these behaviors to their students. They use a system to remind students how to behave. When students have behavior problems, teachers help them learn a better way to act. They reteach the correct behavior. Some students may have an agreement, or contract, to help them change their behavior.

Will RTI be used in my child's school?

The RTI approach is not required. The Texas Education Agency (TEA) encourages schools to use RTI but lets them decide. Using RTI is the school's choice. At the beginning of the school year, or when your child begins intervention, your child's school will notify you if it is using RTI to help your child.

What grades use RTI?

RTI can be used in any grade. Most schools that use RTI are elementary schools. Middle and high schools are starting to use it. RTI in middle and high schools is still fairly new.

Who benefits from RTI?

All students benefit from RTI. RTI focuses on high-quality instruction for all students. All students are usually tested several times a year. These grade-level benchmark measures give teachers a clear picture of student performance. They know who is at-risk and can give those students interventions to close their learning gaps. Teachers chart student progress and can adjust lessons to meet all students' needs.

How do I know if my child is at-risk and receiving intervention?

The school will notify you if your child is at-risk and needs intervention. You will get a description of the intervention and of how your child's progress will be measured and reported to you. At-risk students automatically receive intervention. You do not need to give your permission. A teacher or specialist will provide intervention that matches your child's needs. Your child may be taught in a small group of students with similar needs, or she may work on a computer. You also will receive information about any previous interventions your child received. If you are a foster parent, be sure to keep all RTI information in your child's educational "green binder."

How do I know if RTI is helping my child?

Every two to three weeks your child will be assessed to measure progress. The teacher uses this information to make sure the intervention is working. Meet with your child's teacher to learn how your child's needs are being met. Ask about your child's learning goals and progress. The intervention should be helping your child to close his learning gap.

What if RTI doesn't work for my child?

Sometimes an at-risk student does not make enough progress in the intervention. The teacher knows this from checking the student's progress. If this happens, the teacher tries a different strategy. The student's progress is checked again. If the student is still not meeting goals, the teacher may ask other teachers for ideas to solve the problem. Then, if the student continues to struggle with learning, a school team may meet to figure out what is needed next. You may meet with the team.

At any time, you have the right to request that your child be evaluated for special education. Special education is given to students with a learning disability. The school decides whether to grant your request. Or the school team may decide that your child needs an evaluation for special education. You must give permission for this. After

your child is evaluated, you and the school team will meet. The team may look at RTI information, such as what interventions were taught and how they worked with your child. You and the team may look at other information, too. Together, you will decide whether your child needs special education. RTI information also helps you and the team plan your child's special education instruction.

Remember, you can ask for a special education evaluation at any time if you think your child has a learning disability. This is different from being at-risk. Your child does not have to wait until intervention is over to be given this evaluation. To do this, give the school a written request for the evaluation. The school must respond to your request in one of the following ways:

- 1) The school will begin the evaluation process. Your rights will be explained, and you will give written consent. Your child can continue to receive intervention.

OR

- 2) The school will not evaluate your child. You will get a written explanation about why a disability is not suspected. Your child can continue to receive intervention.

Note that in either case, your child can continue to receive intervention.

Frequently Asked Questions

Q Is RTI a specific program that Texas schools must use?

A No, RTI is not a specific program. RTI is a way of teaching students and making sure that they stay on grade level. Texas schools are not required to use RTI, but any school can choose to use it. Schools using RTI use programs or textbooks that are “evidence-based.” This means that scientific research has proven they work. If students start to struggle with learning or behavior, they get help quickly.

Q How will I receive information about my child’s progress?

A Your school has two ways to notify parents about how it communicates student progress: 1) Each year, schools that use RTI issue a general notice about how they provide RTI. This notice may be in the student handbook. 2) If teachers decide your child needs intervention, you will be given a specific notice at that time. This notice describes your child’s intervention. It also tells how teachers will update you on your child’s progress. If you need more information, ask your child’s teacher.

Q I am a foster parent. Records in my foster child’s education portfolio (“green binder”) show she received intervention at her previous school. How can I make sure she keeps getting the help she needs?

A When you enroll your foster child, share her educational records. RTI records in her green folder are very helpful to the receiving school. Information about her learning gaps and previous interventions can help the school keep your child moving forward in learning. Ask if the school uses RTI to help children learn. If RTI is used, ask what steps can be taken to quickly get her the help she needs.

What does instruction look like in a school using RTI?

A

All RTI schools aim for high-quality instruction. When you visit your child's class, look for:

- Scheduled time for content-area instruction.
- Students with content-area textbooks and materials.
- Daily, direct instruction from the teacher.
- Students working in small groups or pairs to practice what they are learning.
- Classroom routines that promote learning.
- Students getting clear feedback from the teacher.

There are many other features. Ask your child's teacher or principal to tell you about how they provide high-quality instruction.

How does my child's teacher decide that my child needs intervention?

A

In schools using RTI, students are assessed several times during the year.* Teachers compare each student's score to a standard "benchmark score." This is where students should be for their grade level and time of the school year. Teachers identify struggling students who need intervention. Assessments help teachers know which at-risk students need more intervention and which students have caught up and don't need it any more. Some students are "on the edge" for needing intervention and might need to be checked more often.

* Kindergarten students may not be screened at the beginning of the year.

My child needs intervention, and it is provided during the school day. Will my child miss important content-area instruction?

A

All students get daily content-area instruction. Reading and math are especially important content areas. Students must learn basic skills so they do not struggle later. In schools using RTI, teachers try to schedule daily intervention time so at-risk students do not miss content-area instruction.

Q How does RTI work for students with behavior problems?

A At RTI schools, students are taught the rules of behavior. Teachers and school staff all know the rules. They all respond the same way when students don't follow the rules. Teachers identify students who need help behaving. Then they meet with these students to talk about which behaviors they need to change, and ways to do this. Sometimes teachers make an agreement or contract with the student. It clearly spells out reminders and goals for changing behavior. Teachers monitor student use of the new behaviors. They may use a chart to show how behavior is improving.

Q Our school uses a "pull-out" intervention program for my child. Will this make him feel bad?

A All parents want their child to be successful. If you have any concerns about your child's intervention program or how your child feels about it, be sure to talk with his teacher. You can work together to help him see the intervention as a good thing. Often teachers present intervention as just another small group learning activity. Students often like the additional instruction. They gain confidence as their learning skills get better.

Q What should I expect to see on a progress report if my child is at-risk?

A In a school using RTI, either the classroom teacher or a specialist may report progress. The teacher or specialist will discuss your child's intervention goals and how they are working to close your child's gaps in learning. You may see work samples that show what your child is learning. The report may list your child's scores on multiple progress checks. At-risk students often are checked every other week. This is important because it helps teachers know whether the intervention is working. You can ask the teacher about your child's progress: What gaps in learning does my child have? How does the intervention work to close the gaps in my child's learning? What do the scores mean? How is my child behaving? What strategies can I use with my child at home??

Q What does it mean if my child does not make enough progress to close her learning gap?

A RTI focuses on closing a student's learning gap. That is why it is so important for teachers to check student progress often. Rates of learning can be different from one student to the next. Some students quickly learn and then no longer need intervention. Others may take longer to learn. Frequent progress checks allow the teacher to quickly adjust your child's intervention if she does not seem to be closing her learning gap. When progress checks show that a student's needs are not being met in intervention, she may need other services. It could be a sign that she has a learning disability.

Q If my child receives RTI support, does this mean that he won't need special education later?

A Not necessarily. RTI is designed to prevent learning difficulties. Its goal is to close a student's learning gap. Intervention works for many students. But intervention may not work for some. RTI also helps to identify students who may need special education for their learning disabilities.

Q When can parents request a special education evaluation?

A A parent can request an evaluation for special education at any time. Your child can continue to get intervention while she is being evaluated. When the evaluation is done, you will meet with the school's Admission, Review, and Dismissal (ARD) Committee. RTI information may be used to help identify a learning disability. You will review the teacher notes about how your child responded to intervention. This will help you and the committee decide whether your child has a learning disability and needs special education.

Q My child has specific learning disabilities and already receives special education. Can my child also benefit from RTI?

A All students can benefit from RTI. Your child's special education teacher and classroom teacher do many of the same things for students with learning disabilities that they do for all others. They will each assess your child several times during the school year. They will use the assessment information to plan instruction that meets your child's needs. They also will follow your child's Individualized Education Program (IEP) to close his learning gaps.

Q My daughter Letti receives speech therapy and has an Individual Education Program (IEP). Now she is having trouble with reading. Can she get help with reading, too?

A Letti's IEP names the special instruction she gets to help her improve her speech. Talk to her classroom teacher to find out about her reading problems. Her teacher can tell you what is being done to meet her needs. If your school is using RTI, your daughter may also be getting reading intervention. If she is, find out how you will know whether she is improving. Also ask how you can help her practice at home.

If intervention does not help, your child may have a learning disability. She may need additional special education instruction in reading. You and her ARD Committee will study her reading progress. Then you and the ARD Committee will decide if she needs special education reading instruction.

Q My son Jimmy is having trouble in school. He's in third grade. His teacher says that he knows Jimmy is struggling, and he wants to try RTI. He will put him into a daily intervention group for extra help. How long should I let the teacher try RTI before I ask to have him tested for special education?

A A parent can request a special education evaluation at any time. However, you may decide to wait and see if the intervention works. Interventions often last 10 to 12 weeks. Jimmy's progress will be measured every two or three weeks. His teacher will let you know how he is doing. You will be able to see whether the intervention is working. If you think Jimmy is falling behind because he has a disability, request a special education evaluation. He can keep receiving intervention during the evaluation process.

Q My child's school uses RTI. Tony is in intervention, but I think he is getting farther behind. I think he has a learning disability. How can I get him tested for special education?

A You must make a formal written request for special education testing. You can write a note to the school. Once you make a formal request, you will get a booklet about your rights. It is called the *Notice of Procedural Safeguards*.

If the school agrees that Tony may have a learning disability, you will be told about the evaluation process. Be sure to ask any questions you may have. Once you sign a consent form, Tony's testing can begin. During this time, Tony will continue in the intervention. When the testing is completed, you and other members of the ARD Committee will meet to decide if he needs special education.

If the school does not think that Tony may have a learning disability, you will receive a written notice. The notice explains why Tony will not be tested. If you still think the school should test him, there are steps you can take. You can call the Texas Education Agency and ask about "Dispute Resolution." You will learn what to do next.

Q What is my role as a parent?

A Your role is to support your child and to help your child be successful in school! There are many ways you can do this. Monitor your child's learning. Ask your child to tell you what he or she is learning and to show you examples of school work. Read to your child and ask your child to read to you. When your child has homework, be nearby. Review your child's work, help with practice, and give feedback. Ask your child's teacher for other ways you can help at home. If your child is at-risk and receiving intervention, find out specific things you can do. Finally, be positive and celebrate your child's successes.

Q I am a foster parent. My foster child is behind in reading and math. Can she get intervention services too?

A Yes, If her school uses RTI, tell her teacher about her needs. When you enroll her, give the school the 2085 form. It shows who the child's Education Decision Maker is (usually you, the foster parent). Share information from her education portfolio. Ask how soon she can be assessed for RTI. If your foster child moves to a different school, be sure to get her intervention records to take along. These records are not required, but they are very helpful to the new school. They can save valuable time in assessing her and can help find the right intervention for her at the new school.

If the school does not use RTI, tell her teacher about her needs. Ask about tutoring and other services. Children in foster care can get many academic support services at no cost. School counselors and caseworkers know about these services.

If your foster child receives special education, he or she must have a surrogate parent. This is someone trained to represent the child when educational decisions are made. You or someone else, such as a Court Appointed Special Advocate (CASA), may be appointed as the surrogate parent.

I want to learn more about RTI. What are some websites I can visit?

A
